Madrid, Spain (CET) · 100% remote

PROFILE

Full Stack Developer with formal technical training (two Spanish IT diplomas, **DAM + SMR**), working in IT since 2018. I am currently the **only technical person** at a real estate company: I own every project from requirements with management to code, servers and security in production, with no team behind me. I work with **AI (Claude Code)** every day to ship much faster without losing technical control: everything that reaches production goes through my own review, automated tests and CI.

CURRENT ROLE

Full Stack Developer

May 2026 – Present

BE MADRID DREAMS SL · Madrid, Spain

Sole person in charge of technology: development, systems and security.

2	7	1,100+	340+
internal CRMs built from scratch	websites and APIs in production	commits in 4 months	automated test files

- **BeMadrid CRM** (Next.js 16, React 19, Drizzle ORM, MySQL): calendar, lead capture, contracts, finance, incidents, reports and properties, plus bookings, receipts, an occupancy calendar and owner and tenant portals with document signing. Role- and department-based permissions enforced server-side and configurable on the fly.
- **AI chatbot with RAG:** queries the CRM (properties, availability) before answering and books appointments 24/7 from real Google Calendar availability.
- **Berentia CRM:** custom REST API (Express 5, MySQL, JWT) with 36 modules, consumed by a Flutter app and two websites: leads, contracts, commissions, a pricing tool, IMAP inbox, Google Calendar and SMS/WhatsApp notifications via Twilio. Handles ID documents, IBANs and SEPA direct debits.
- **4 private lead-generation portals** (Next.js 16) with custom authentication, partner onboarding, leads, contracts and training with exams.
- **Security and GDPR:** audited two legacy systems holding personal and banking data and fixed critical vulnerabilities: SQL injection, XSS, IDOR, RCE via file uploads and amount tampering in the Redsys payment gateway. RBAC, rate limiting, secrets kept out of the codebase and access audit trails.
- **Zero-downtime migrations:** Node 20→24 and Next.js 14→16 / React 19, with 186 pages and 115 API routes verified one by one and a documented rollback plan.
- **DevOps on a Linux VPS** (AlmaLinux 9, cPanel/WHM) over SSH: Apache as reverse proxy, PM2, atomic deployments with rollback, SSL, DNS and self-hosted company email (SPF, DKIM, DMARC).
- **AI and quality:** Claude Code in the daily workflow; every change goes through my own review, tests (Vitest, Playwright) and CI on GitHub Actions before deployment. Technical and executive documentation for management.

> **In production:** bemadrid.es (migrated to Next.js 16, headless WordPress and Redsys payments) · berentia.com · afianzagarantias.com · colaboraygana.com · colaboradoresasociados.com. Behind them are CRMs and internal dashboards with real customer data.

STACK

Frontend

TypeScript · React 19 · Next.js 16 · JavaScript · HTML / CSS · Tailwind CSS 4 · Astro · Flutter

Backend & data

Node.js 24 · Express 5 · Drizzle ORM · Zod · REST APIs · JWT · MySQL / MariaDB · PostgreSQL · Supabase · Firebase / Firestore

DevOps

Linux / SSH · Docker · Apache · PM2 · cPanel / WHM · DNS · SSL · GitHub Actions

Quality & security

Vitest · Playwright · Git / GitHub · CI/CD · OWASP · GDPR · RBAC

AI & automation

Claude Code · Vibe coding · Agentic coding · TRAE · Gemini · OpenClaw · n8n / Make · RAG

Also

Java · C# / .NET · Python · PHP · Dart · SQL

EDUCATION

Multiplatform App Development (DAM)
Higher Technician Diploma, EQF 5 · Campus FP, Getafe · 2022

Computer Systems and Networks (SMR)
Technician Diploma, EQF 4 · IES Luis Vives, Leganés · 2019

LANGUAGES

Spanish	Native
English	C1 · Dublin immersion
Italian	Basic

HOW I WORK WITH AI

01 Requirements
With the business and management, in plain language.

02 Plan
Architecture, risks and a rollback plan before touching code.

03 Code with Claude Code
Fast iteration, guided by me, never blind.

04 Review & tests
I read every change. Vitest and Playwright.

05 CI & deployment
GitHub Actions and atomic deployment with rollback.

AI gives me speed; ownership of the code stays with me. That is how I have single-handedly run two CRMs, seven websites and APIs, and a company's server in production.

PREVIOUS EXPERIENCE

Full Stack Web Developer
Apr 2023 – May 2026

Freelance · Madrid · remote

- Web platform with API integrations for **Agile European Society** (agileeuropeansociety.org), an agile certification body. Next.js, Astro, TypeScript, Tailwind and Supabase.
- SEO-optimised commercial websites: simplyglowy.com and equipajelowcost.es.
- Automations with Make and n8n: message triage and appointment management over WhatsApp Business for clinics, and email systems with dynamic segmentation.

Application Developer
Jan 2022 – Jun 2023

ORIGINPATH · Leganés (Madrid)

- Development and maintenance of web, desktop and Android applications with Java and SQL.
- Scrum team work: tickets in Jira Service Desk, testing and documentation.

Level 2 Support Technician & Programmer
Sep 2018 – Jul 2019

EAR SOLUTIONS · Leganés (Madrid)

- Data migration from clients' legacy systems into the company's software.
- Remote L2/L3 support for the in-house software via Jira Service Desk, and remote deployment of updates.

OTHER EXPERIENCE · CUSTOMER-FACING

Sales Advisor · Autos Madrid & Auto Gallery Premium 2024 – 2026
Vehicle financing, customer retention and online listings, alongside freelance projects.

Private English Tutor Since 2024
Personalised lessons: explaining complex things simply.

COURSES

Self-taught: AI-assisted development
Claude Code, TRAE and agents with OpenClaw · 2026

Java Spring Boot and C# MVC .NET Core
Udemy · 2022

Ethical hacking (20 h)
U-Tad, Madrid · 2017

REMOTE-READY

- Proven autonomy: the company's only tech person, with no one to escalate to.
- Direct contact with the business and clear documentation for management.
- Remote freelance work (2023–2026) and remote L2/L3 customer support.
- C1 English for international teams.
